DESCRIPTION

Efforts to optimize operations & maintenance both in the offshore and land-based industries over the last few years have increased significantly due to recurrent as well as emerging challenges. The main focus of these efforts has been on cost management, technology implementation, and operational improvements for better production, safety and environment.

There is considerable potential to optimize operations & maintenance decisions and activities through various technological, operational, process-related, and even managerial solutions for a significant positive impact in the value creating process.

PURPOSE

This Knowledge Hub aims at bringing diverse expertise, know-how, up-to-date information, and professional challenges to a common interactive Forum. This is the place to effectively explore ‘Good to Great’ innovative solutions.

Our dedication is to create an active environment for professional and personal development involving top experts, experienced practitioners, and leading researchers.

CURRENT TOPICS

- Work process simplification and optimization. (Jan 2013)
- Value Driven Maintenance (VDM): A Path to enhance shareholder value. (Sept 2013)
- Integrated Lifecycle Asset Planning (ILAP) (March 2015)
- ISO 55000 Asset management standard, Applications, and Learning from Global cases (Nov 2015)

VALUE TO PARTICIPANTS

- New information and knowledge
- New perspectives to your challenges
- Access to our professional network
- Expert assistance to resolve your challenges
- Technical reports on specific topics emerging from the Hub
- Continuing your professional education

“Being smarter together for performance excellence, innovation, and growth”
