

# GAP ANALYSIS

The European Charter for Researchers and Code of Conduct for the Recruitment of Researchers

University of Stavanger (UiS), Norway 24. October 2016

# I. Ethical and professional circumstances

#### 1. Research freedom

Researchers should focus their research for the good of mankind and for expanding the frontiers of scientific knowledge, while enjoying the freedom of thought and expression, and the freedom to identify methods by which problems are solved, according to recognised ethical principles and practices. Researchers should, however, recognise the limitations to this freedom that could arise as a result of particular research circumstances (including supervision/guidance/management) or operational constraints, e.g. for budgetary or infrastructural reasons or, especially in the industrial sector, for reasons of intellectual property protection. Such limitations should not, however, contravene recognised ethical principles and practices, to which researchers have to adhere.

### 3. Professional responsibility

Researchers should make every effort to ensure that their research is relevant to society and does not duplicate research previously carried out elsewhere. They must avoid plagiarism of any kind and abide by the principle of intellectual property and joint data ownership in the case of research carried out in collaboration with a supervisor(s) and/or other researchers. The need to validate new observations by showing that experiments are reproducible should not be interpreted as plagiarism, provided that the data to be confirmed are explicitly quoted. Researchers should ensure, if any aspect of their work is delegated, that the person to whom it is delegated has the competence to carry it out.

# 4. Professional attitude

Researchers should be familiar with the strategic goals governing their research environment and funding mechanisms, and should seek all necessary approvals before starting their research or accessing the resources provided. They should inform their employers, funders or supervisor when their research project is delayed, redefined or completed, or give notice if it is to be terminated earlier or suspended for whatever reason.

| Relevant legislation   | UiS' regulations and practice   | Comments/Challenges   | Actions/measures  |
|--|---|---|---|
| Research projects must be approved in<br>accordance with acts including <u>The Health</u><br><u>and Research Act</u> (REC) and <u>The Personal</u><br><u>Data Act</u> (NSD), cf. section 2.<br><u>The Universities and University Colleges</u><br><u>Act</u> | Action plans and strategic plans at all<br>levels within the institution are<br>available.<br>Research projects shall be conducted<br>in compliance with UiS practice and<br>regulations at the appropriate level in<br>the institution. Online compendia are<br>used to compile all applicable<br>procedures and guidelines.<br>Project applications shall be<br>approved at departmental<br>management level with regard to<br>academic prioritisation, claims for<br>financial and administrative<br>resources, input, recruitment, etc.<br>Separate reporting procedures apply<br>to externally-funded projects. Three<br>full-time staff in the R&I Division<br>provide support and guidance as<br>required on the development of<br>proposals and project execution, in<br>addition to Research Advisers<br>working at Faculty level. | A revision of the University's strategy<br>is in progress and all documents<br>related to the process are available<br>to all employees via the Intranet.<br>Knowledge of project management<br>and related procedures could be<br>enhanced.<br>Continue to develop project<br>management expertise and expertise<br>in writing applications. A number of<br>courses on writing applications<br>(Norwegian Research Council,<br>Horizon 2020) are held each year. | Better integrate project management into<br>PhD studies by arranging a yearly seminar<br>for example.<br>Internal regulations and practice regarding<br>project management at UiS shall be part of<br>the introductory programme for newly-<br>appointed researchers. |

# 5. Contractual and legal obligations

Researchers at all levels must be familiar with the national, sectoral or institutional regulations governing training and/or working conditions. This includes Intellectual Property Rights regulations, and the requirements and conditions of any sponsor or funders, independently of the nature of their contract. Researchers should adhere to such regulations by delivering the required results (e.g. thesis, publications, patents, reports, new products development, etc.) as set out in the terms and conditions of the contract or equivalent document.

| Relevant legislation   | UiS' regulations and practice  | Comments/Challenges  | Actions/measures   |
|--|--|--|--|
| Researchers' terms and conditions of<br>employment are regulated by:<br><u>The Universities and University Colleges Act</u> ,<br><u>The Public Administration Act</u><br><u>https://lovdata.no/dokument/NL/lov/1983-03-04-3?q=tjenestemannslovenThe Working<br/>Environment Act</u><br><u>The Act respecting the Right to Employees'</u><br><u>Inventions</u><br><u>The Copyright Act</u><br><u>The Patents Act</u><br>Cf. points 8, 24 and 31 | The obligations lie with individual<br>researchers, and the task of UiS<br>will be to make essential<br>information available and to clearly<br>inform researchers that they are<br>obliged to familiarise themselves<br>with it.<br>The standard contract of<br>employment refers to relevant<br>regulations on employment terms<br>and conditions. It clarifies rights<br>and obligations in accordance with<br>the IPR policy of UiS.<br>The IPR policy also regulates<br>procedures to be followed by<br>employees regarding technology<br>transfer, including information<br>about<br>Validé (UiS's Technology Transfer<br>Office). | UiS should improve the information<br>flow with respect to duties and<br>obligations connected to<br>participation in externally-funded<br>projects. | Start-up meetings for externally-funded<br>projects coordinated by UiS will be<br>generalised to all departments across the<br>organisation. |

# 6. Accountability

Researchers need to be aware that they are accountable towards their employers, funders or other related public or private bodies as well as, on more ethical grounds, towards society as a whole. In particular, researchers funded by public funds are also accountable for the efficient use of taxpayers' money. Consequently, they should adhere to the principles of sound, transparent and efficient financial management and cooperate with any authorised audits of their research, whether undertaken by their employers/funders or by ethics committees. Methods of collection and analysis, the outputs and, where applicable, details of the data should be open to internal and external scrutiny, whenever necessary and as requested by the appropriate authorities.

# 7. Good practice in research

Researchers should at all times adopt safe working practices, in line with national legislation, including taking the necessary precautions for health and safety and for recovery from information technology disasters, e.g. by preparing proper back-up strategies. They should also be familiar with the current national legal requirements regarding data protection and confidentiality protection requirements, and undertake the necessary steps to fulfil them at all times.

| Relevant legislation   | UiS' regulations and practice       | Comments/Challenges                    | Actions/measures                              |

# 8. Dissemination, exploitation of results

All researchers should ensure, in compliance with their contractual arrangements, that the results of their research are disseminated and exploited, e.g. communicated, transferred into other research settings or, if appropriate, commercialised. Senior researchers, in particular, are expected to take a lead in ensuring that research is fruitful and that results are either exploited commercially or made accessible to the public (or both) whenever the opportunity arises. (See also section 3.)

# 9. Public engagement

Researchers should ensure that their research activities are made known to society at large in such a way that they can be understood by non-specialists, thereby improving the public's understanding of science. Direct engagement with the public will help researchers to better understand public interest in priorities for science and technology and also the public's concerns.

# 10. Non-discrimination

See also part II

Employers and/or funders of researchers will not discriminate against researchers in any way on the basis of gender, age, ethnic, national or social origin, religion or belief, sexual orientation, language, disability, political opinion, social or economic condition.

| Relevant legislation   | UiS' regulations and practice                                      | Comments/Challenges                     | Actions/measures                             |

# 11. Evaluation/appraisal systems

Employers and/or funders should introduce for all researchers, including senior researchers, evaluation/appraisal systems for assessing their professional performance on a regular basis and in a transparent manner by an independent (and, in the case of senior researchers, preferably international) committee.

|                                | All employees in teaching and research positions have performance appraisal interviews once a year.                                      |                     |                  |

# II. Recruitment

# 12. Recruitment

Employers and/or funders should ensure that the entry and admission standards for researchers, particularly at the beginning of their careers, are clearly specified and should also facilitate access for disadvantaged groups or for researchers returning to a research career, including teachers (of any level) returning to a research career. Employers and/or funders of researchers should adhere to the principles set out in the Code of Conduct for the Recruitment of Researchers when appointing or recruiting researchers.

# 13. Recruitment (Code)

Employers and/or funders should establish recruitment procedures which are open, efficient, transparent, supportive and internationally comparable, as well as tailored to the type of positions advertised. Advertisements should give a broad description of knowledge and competencies required, and should not be so specialised as to discourage suitable applicants. Employers should include a description of the working conditions and entitlements, including career development prospects. Moreover, the time allowed between the advertisement of the vacancy or the call for applications and the deadline for reply should be realistic

# 14. Selection (Code)

Selection committees should bring together diverse expertise and competences and should have an adequate gender balance and, where appropriate and feasible, include members from different sectors (public and private) and disciplines, including from other countries and with relevant experience to assess the candidate. Whenever possible, a wide range of selection practices should be used, such as external expert assessment and face-to-face interviews. \*\*Members of selection panels should be adequately trained.

# 16. Judging merit (Code)

The selection process should take into consideration the whole range of experience of the candidates. While focusing on their overall potential as researchers, their creativity and level of independence should also be considered. This means that merit should be judged qualitatively as well as quantitatively, focusing on outstanding results within a diversified career path and not only on the number of publications. Consequently, the importance of bibliometric indices should be properly balanced within a wider range of evaluation criteria, such as teaching, supervision, teamwork, knowledge transfer, management of research and innovation and public awareness activities. For candidates from an industrial background, particular attention should be paid to any contributions to patents, development or inventions.

Clarify expectations for expert committees. |

# 17. Variations in the chronological order of CVs (Code)

Career breaks or variations in the chronological order of CVs should not be penalised, but regarded as an evolution of a career, and consequently, as a potentially valuable contribution to the professional development of researchers towards a multidimensional career track. Candidates should therefore be allowed to submit evidence-based CVs, reflecting a representative array of achievements and qualifications appropriate to the post for which application is being made.

# 18. Recognition of mobility experience (Code)

Any mobility experience, e.g. a stay in another country/region or in another research setting (public or private) or a change from one discipline or sector to another, whether as part of the initial research training or at a later stage of the research career, or virtual mobility experience, should be considered as a valuable contribution to the professional development of a researcher

# 19. Recognition of qualifications (Code)

See also sections 16 and 17.

Employers and/or funders should provide for appropriate assessment and evaluation of the academic and professional qualifications, including non-formal qualifications, of all researchers, in particular within the context of international and professional mobility. They should inform themselves and gain a full understanding of rules, procedures and standards governing the recognition of such qualifications and, consequently, explore existing national law, conventions and specific rules on the recognition of these qualifications through all available channels.

# 20. Seniority (Code)

The levels of qualifications required should be in line with the needs of the position and not be set as a barrier to entry. Recognition and evaluation of qualifications should focus on judging the achievements of the person rather than his/her circumstances or the reputation of the institution where the qualifications were gained. As professional qualifications may be gained at an early stage of a long career, the pattern of lifelong professional development should also be recognised.

### 21. Postdoctoral appointments (Code)

Clear rules and explicit guidelines for the recruitment and appointment of postdoctoral researchers, including the maximum duration and the objectives of such appointments, should be established by the institutions appointing postdoctoral researchers. Such guidelines should take into account time spent in prior postdoctoral appointments at other institutions and take into consideration that the postdoctoral status should be transitional, with the primary purpose of providing additional professional development opportunities for a research career in the context of long-term career prospects.

# III. Conditions of employment and social security

## 22. Recognition of the profession

All researchers engaged in a research career should be recognised as professionals and be treated accordingly. This should commence at the beginning of their careers, namely at postgraduate level, and should include all levels, regardless of their classification at national level (e.g. employee, postgraduate student, doctoral candidate, postdoctoral fellow, civil servants).

| Relevant legislation   | UiS' regulations and practice  | Comments/Challenges   | Actions/measures  |
|--|--|---|---|
| Relevant legislationThe Universities and University CollegesAct Section 6-3, appointment to teachingand research positions based on the jobdescription (including qualificationrequirements) stated in theannouncement text and positiondescription (advertisement)The Regulations concerning appointmentand promotion to teaching and researchposts specify criteria regardingappointment for various categories ofpositions, and rules on assessingapplicants.The Regulations concerning terms andconditions of employment for the postsof post-doctoral research fellow,research fellow, research assistant and | <ul> <li>UiS' regulations and practice</li> <li>Scientists and candidates for such posts are recognised by the University of Stavanger, regardless of their skill level.</li> <li>Candidates with a five-year Master's can be offered a recruitment position as a research fellow with the aim of completing research training. Many research fellows continue in their post-doctoral positions before they are appointed to ordinary teaching and research posts, if applicable.</li> <li>Doctoral students who are employed as research fellows and post-doctoral fellows have the same rights and status as other employees.</li> </ul> | Comments/Challenges<br>There is a difference in status<br>between doctoral students who are<br>appointed to a research fellowship at<br>the University of Stavanger and those<br>who do not have employment at the<br>University. PhD students who are not<br>employees at UiS may not have an<br>office on campus and can sometimes<br>have less opportunity to become fully<br>integrated into the academic<br>community. | Actions/measures<br>The UiS Supervisor Training is focusing on<br>the supervisors' role in involving their<br>students in the academic community.<br>Each institute is encouraged to create<br>arenas where all of their doctoral students<br>can meet, between themselves and with<br>their supervisors. |

### 23. Research environment

Employers and/or funders of researchers should ensure that the most stimulating research or research training environment is created which offers appropriate equipment, facilities and opportunities, including for remote collaboration over research networks, and that the national or sectoral regulations concerning health and safety in research are observed. Funders should ensure that adequate resources are provided in support of the agreed work programme.

| Relevant legislation        | UiS' regulations and practice   | Comments/Challenges  | Actions/measures   |
|-----------------------------|---|--|--|
| The Working Environment Act | The University of Stavanger has a<br>good infrastructure for research and<br>a systematic approach to health,<br>safety and the environment (HSE).<br>In the area of HSE, national law<br>imposes a comprehensive monitoring<br>responsibility on the employer. All<br>managers are responsible for<br>HSE work at their unit, with<br>assistance from consultants in the<br>HR department.<br>The development of research groups<br>and an effective infrastructure for<br>these must be prioritised.<br>Research activities are mainly<br>project-funded in Norway. | Externally-funded research projects<br>do not always cover the costs of the<br>resources required. | Employee review: conducted every other<br>year. Line managers are responsible for<br>following up the results of the review.<br>Ensure that the overheads on external<br>projects cover the real costs of necessary<br>resources.<br>Clarify expectations and economic<br>conditions before the appointment of<br>researchers. |

### 24. Working conditions

Employers and/or funders should ensure that the working conditions for researchers, including for disabled researchers, provide where appropriate the flexibility deemed essential for successful research performance in accordance with existing national legislation and with national or sectoral collective-bargaining agreements. They should aim to provide working conditions which allow both women and men researchers to combine family and work, children and career. Particular attention should be paid, inter alia, to flexible working hours, part-time working, tele-working and sabbatical leave, as well as to the necessary financial and administrative provisions governing such arrangements.

| Relevant legislation                      | UiS' regulations and practice   | Comments/Challenges   | Actions/measures   |
|---|---|---|--|

|   | Employees are entitled to employee<br>interviews and participation with<br>regard to issues of pay and working<br>conditions. |   |  |
|   | UiS emphasises the universal design of the campus.  |   |  |

### 25. Stability and permanence of employment

Employers and/or funders should ensure that the performance of researchers is not undermined by instability of employment contracts, and should therefore commit themselves as far as possible to improving the stability of employment conditions for researchers, thus implementing and abiding by the principles and terms laid down in the EU Directive on Fixed-Term Work.

| Relevant legislation   | UiS' regulations and practice   | Comments/Challenges                      | Actions/measures  |

# 26. Funding and salaries

Employers and/or funders of researchers should ensure that researchers enjoy fair and attractive conditions of funding and/or salaries with adequate and equitable social security provisions (including sickness and parental benefits, pension rights and unemployment benefits) in accordance with existing national legislation and with national or sectoral collective bargaining agreements. This must include researchers at all career stages including early-stage researchers, commensurate with their legal status, performance and level of qualifications and/or responsibilities.

|  |  |                     |                  |

# 27. Gender balance

Employers and/or funders should aim for a representative gender balance at all levels of staff, including at supervisory and managerial level. This should be achieved on the basis of an equal opportunity policy at recruitment and at the subsequent career stages without, however, taking precedence over quality and competence criteria. To ensure equal treatment, selection and evaluation committees should have an adequate gender balance.

| Relevant legislation  | UiS' regulations and practice   | Comments/Challenges   | Actions/measures   |
|---|---|---|--|
| Relevant legislationThe Universities and University CollegesAct Section 6-2: The institutions shallactively promote equality in all jobcategories. They<br>will have insight into all employment   |   |  |
|   | matters and may report to the appointment agency before decisions are made.   |   |  |

#### 28. Career development

Employers and/or funders of researchers should draw up, preferably within the framework of their human resources management, a specific career development strategy for researchers at all stages of their career, regardless of their contractual situation, including for researchers on fixed-term contracts. It should include the availability of mentors involved in providing support and guidance for the personal and professional development of researchers, thus motivating them and contributing to reducing any insecurity in their professional future. All researchers should be made familiar with such provisions and arrangements.

| Relevant legislation                    | UiS' regulations and practice          | Comments/Challenges                | Actions/measures                              |

|   |  |                                    |   |

### 29. Value of mobility

Employers and/or funders must recognise the value of geographical, intersectoral, inter- and trans-disciplinary and virtual mobility as well as mobility between the public and private sector as an important means of enhancing scientific knowledge and professional development at any stage of a researcher's career. Consequently, they should build such options into the specific career development strategy and fully value and acknowledge any mobility experience within their career progression/appraisal system. This also requires that the necessary administrative instruments be put in place to allow the portability of both grants and social security provisions, in accordance with national legislation.

| Relevant legislation | UiS' regulations and practice   | Comments/Challenges  | Actions/measures  |
|----------------------|---|--|---|
|                      | The intensification of<br>internationalisation efforts has been<br>determined as a strategic focus going<br>forward to 2020.<br>It is expected that all research fellows<br>will spend a period abroad in a<br>recognised and relevant research<br>environment.<br>Salaries or scholarships can be<br>transferred abroad. | The transfer of social security<br>benefits must be resolved on a<br>national and international level.<br>UiS does not currently have sufficient<br>administrative capacity and expertise<br>to assist in mobility work.<br>The emphasis placed on international<br>experience and networking in<br>appointments must be made clearer<br>in the wording of the announcement.<br>Not all candidates have had a long<br>stay abroad in a recognised and<br>relevant research environment during<br>their period of employment. | Strengthen administrative support for<br>international mobility.<br>Clarify to supervisors that study abroad<br>must be included in a research fellow's<br>progress plan.<br>Review announcement templates with the<br>aim of better emphasising the value of<br>overseas experience and international<br>networking when making appointments to<br>scientific positions. |

## 30. Access to career advice

Employers and/or funders should ensure that career advice and job placement assistance, either in the institutions concerned, or through collaboration with other structures, is offered to researchers at all stages of their careers, regardless of their contractual situation.

| Relevant legislation | UiS' regulations and practice   | Comments/Challenges  | Actions/measures   |
|----------------------|---|--|--|
|                      | cf. section 28.   | Some institute managers have too many employees to be able to  | Consideration will be given to hiring managers with personnel responsibility |
|                      | Skills development has been   | maintain good monitoring of the  | below institute manager level, in connection                                 |

|                      | All staff will be encouraged and given<br>opportunities to develop their skills<br>throughout their entire careers. | UiS does not currently have sufficient<br>administrative capacity and expertise<br>to assist in career guidance. | Include information about career opportunities in the doctorate programme.   |
|                      | All employees will have a development review with their manager once a year.  | There is insufficient focus on career opportunities in the doctorate programme.                                  |  |

# 31. Intellectual Property Rights

Employers and/or funders should ensure that researchers at all career stages reap the benefits of the exploitation (if any) of their R&D results through legal protection and, in particular, through appropriate protection of Intellectual Property Rights, including copyrights. Policies and practices should specify what rights belong to researchers and/or, where applicable, to their employers or other parties, including external commercial or industrial organisations, as possibly provided for under specific collaboration agreements or other types of agreement.

| Relevant legislation                         | UiS' regulations and practice   | Comments/Challenges                      | Actions/measures               |

|  |   |  |                                |

# 32. Co-authorship

Co-authorship should be viewed positively by institutions when evaluating staff, as evidence of a constructive approach to the conduct of research. Employers and/or funders should therefore develop strategies, practices and procedures to provide researchers, including those at the beginning of their research careers, with the necessary framework conditions so that they can enjoy the right to be recognised and listed and/or quoted, in the context of their actual contributions, as co-authors of papers, patents, etc., or to publish their own research results independently from their supervisor(s).

| Relevant legislation                 | UiS' regulations and practice           | Comments/Challenges              | Actions/measures                       |

|                                      |   |                                  |  |

# 33. Teaching

Teaching is an essential means for the structuring and dissemination of knowledge and should therefore be considered a valuable option within the researchers' career paths. However, teaching responsibilities should not be excessive and should not prevent researchers, particularly at the beginning of their careers, from carrying out their research activities. Employers and/or funders should ensure that teaching duties are adequately remunerated and taken into account in the evaluation/appraisal systems, and that time devoted by senior members of staff to the training of early stage researchers should be counted as part of their teaching commitment. Suitable training should be provided for teaching and coaching activities as part of the professional development of researchers.

|  | have completed supervisor training.                                      |   |   |
|  |  |   |   |

# 34. Complaints/appeals

Employers and/or funders of researchers should establish, in compliance with national rules and regulations, appropriate procedures, possibly in the form of an impartial (ombudsman-type) person to deal with complaints/appeals of researchers, including those concerning conflicts between supervisor(s) and early-stage researchers. Such procedures should provide all research staff with confidential and informal assistance in resolving work-related conflicts, disputes and grievances, with the aim of promoting fair and equitable treatment within the institution and improving the overall quality of the working environment.

| Relevant legislation  | UiS' regulations and practice  | Comments/Challenges  | Actions/measures  |
|---|--|--|---|
| The Working Environment Act<br>Sections 2-3 and 2-4 on notification of<br>unacceptable behaviour. | Conflicts shall be handled within the<br>line structure, which means the<br>immediate superior is responsible for<br>following up such cases.<br>The head safety delegate and/or the<br>employee representative shall be<br>involved to the extent necessary.<br>The university has prepared various<br>guidelines for safeguarding a good<br>working environment and promoting<br>fair and equitable treatment,<br>including Guidelines for conflict<br>management.<br>The university notification procedures<br>and Guidelines for conflict<br>management are available to<br>employees on the university website. | Many managers have so many<br>employees that it is difficult to follow<br>up on an individual; this may result in<br>late participation in a complaint case. | Consideration will be given to hiring<br>managers with personnel responsibility<br>below institute manager level, in connection<br>with the ongoing OU issue. |

### 35. Participation in decision-making bodies

Employers and/or funders of researchers should recognise it as wholly legitimate, and indeed desirable, that researchers be represented in the relevant information, consultation and decision-making bodies of the institutions for which they work, so as to protect and promote their individual and collective interests as professionals and to actively contribute to the workings of the institution.

|                                       | employer.   |                     |                  |

### 36. Relation with supervisors

Researchers in their training phase should establish a structured and regular relationship with their supervisor(s) and faculty/departmental representative(s) so as to take full advantage of their relationship with them. This includes keeping records of all work progress and research findings, obtaining feedback by means of reports and seminars, applying such feedback and working in accordance with agreed schedules, milestones, deliverables and/or research outputs.

### 37. Supervision and managerial duties

Senior researchers should devote particular attention to their multi-faceted role as supervisors, mentors, career advisors, leaders, project coordinators, managers or science communicators. They should perform these tasks to the highest professional standards. With regard to their role as supervisors or mentors of researchers, senior researchers should build up a constructive and positive relationship with the early-stage researchers, in order to set the conditions for efficient transfer of knowledge and for the further successful development of the researchers' careers.

| supervisors and consideration of<br>their requirements in terms of<br>competence/qualifications.   |

**38. Continuing Professional Development** Researchers at all career stages should seek to continually improve themselves by regularly updating and expanding their skills and competencies. This may be achieved by a variety of means including, but not restricted to, formal training, workshops, conferences and e-learning.

One measure<br>may be consecutive time allocated for<br>research, or reduced teaching duties for<br>a limited period. |

## 39. Access to research training and continuous development

Employers and/or funders should ensure that all researchers at any stage of their career, regardless of their contractual situation, are given the opportunity for professional development and for improving their employability through access to measures for the continuing development of skills and competencies. Such measures should be regularly assessed for their accessibility, take-up and effectiveness in improving competencies, skills and employability.

# 40. Supervision

Employers and/or funders should ensure that a person is clearly identified to whom early-stage researchers can refer for the performance of their professional duties, and should inform the researchers accordingly. Such arrangements should clearly define that the proposed supervisors are sufficiently expert in supervising research, have the time, knowledge, experience, expertise and commitment to be able to offer the research trainee appropriate support and provide for the necessary progress and review procedures, as well as the necessary feedback mechanisms.
